PROFESSIONAL SUMMARY

UX Designer with four years of experience across government and enterprise platforms, evolving from frontend development into end-to-end design ownership. Comfortable working from Figma prototypes through to delivery, with hands-on implementation experience that supports tight engineering collaboration. Recent work focuses on translating complex regulatory and operational requirements into accessible, user-centred workflows.

SKILLS

Design: Interaction design, usability testing, journey mapping, information architecture, competitive benchmarking, WCAG 2.2 accessibility, conversational AI design, design systems

Tools: Figma, FigJam, Miro, Jira, Confluence, HTML, CSS, Tailwind, JavaScript, React, GitHub Copilot

PROFESSIONAL EXPERIENCE

Avanade | Analyst, Frontend Engineer

May 2022 – Present

Government Client (Conversational AI Platform) | UX Designer and Frontend Engineer July 2025 – November 2025

- Sole frontend designer-developer on a public-facing conversational AI product for a federal government department, owning UI design, implementation, accessibility, and responsive behaviour end-to-end
- Drove design direction in the absence of a client brief, using iterative prototyping as the requirements-gathering mechanism across more than a dozen rounds of stakeholder review
- Implemented to WCAG 2.2 with attention to conversational-AI-specific challenges including streaming response screen reader announcements, focus management, and assistive technology support
- Grounded design decisions in competitive benchmarking against major consumer AI products, used as evidence base in stakeholder negotiations on patterns and mobile layout trade-offs

Internal Product Engagement | UX Designer and Frontend Developer

July 2024 – June 2025

- Redesigned a previously undelivered Marketplace dashboard for an infrastructure monitoring product, simplifying navigation of topology templates through Figma prototyping and iterative UI design
- Facilitated design workshops with engineers and product stakeholders to surface trade-offs and refine features based on feasibility and user value
- Implemented the redesigned frontend, adjusting backend payload structures to support reusable and user-contributed topology templates

Australian Taxation Office | IT Application Developer

October 2022 – December 2023

- Implemented WCAG 2.1 AA compliant frontend components for complex government workflows on a public platform used by millions of users
- Worked across the Sitecore CMS platform to deliver accessible, responsive interfaces aligned with design specifications
- Collaborated daily with designers, business analysts, QA, and content authors to ensure design intent was preserved in production

EDUCATION

University of Technology, Sydney

Bachelor of Information Technology
